EDUCATION

University of Illinois Urbana-Champaign

Ph.D in Electrical Engineering, GPA: 3.97/4.00

Urbana-Champaign, USA

08/19 - 05/24 (Expected)

Indian Institute of Technology Bombay

B.Tech + M.Tech in Mechanical Engineering, GPA: 8.63/10.00

Bombay, India

07/14 - 08/19

RESEARCH INTERESTS

I am broadly interested in the theory and applications of control, optimization and learning. I mostly use topological/geometric and stochastic tools in my research, mainly focusing on:

- Topological data analysis and Machine learning; Biparametric persistent homology, Stochastic differential topology, Applications to 3D vision.
- Control and Optimization; Geometric nonlinear control, Robust optimization.

PUBLICATIONS

Preprints and more details of all papers are available on [arXiv](#) and [Google scholar](#).

1. **M. Assif P K** *Singularities of Gaussian random maps into the plane*. Submitted to Journal of Applied and Computational Topology.
2. **M. Assif P K**, Y. Baryshnikov *Biparametric persistence of smooth filtrations*. Submitted to Computational Geometry.
3. **M. Assif P K**, M. R. Sheriff, D. Chatterjee *Measure of quality of finite-dimensional linear systems: A frame-theoretic view*. Systems and Control Letters, Vol.151, 2021.
4. **M. Assif P K**, D. Chatterjee, R. Banavar *Scenario approach for minmax optimization in the nonconvex setting: Positive results and caveats*. SIAM Journal on Optimization, Vol.30(2), 2020.
5. **M. Assif P K**, D. Chatterjee, R. Banavar *A simple proof of the discrete time geometric Pontryagin maximum principle*. Automatica, Vol.114, 2020.
6. **M. Assif**, R. Banavar, A. M. Bloch, M. Camarinha, L. Colombo *Variational collision avoidance on Riemannian manifolds*. Proceedings of the IEEE Conference on Decision and Control, 2018.

EXPERIENCE

University of Illinois Urbana-Champaign, Dept. of ECE

Graduate Research Assistant, Advisor: Prof. Yuliy Baryshnikov

Fall 2019 - Present

- Developed a geometric approach to biparametric persistent homology (BPH) for extracting robust topological features from data. Working on applications of BPH to 3D shape classification and retrieval.
- Studied the statistical properties of the BPH descriptors extracted from Gaussian random fields.

Corteva Agriscience

Research Intern

Summer 2020

- Created mathematical models and wrote python scripts that describe and simulate the onset of insect resistance to various pest management techniques in a variety of seeds.
- Studied the effectiveness of a combination of insect resistance management tactics and their economic and environmental impact using these models.

AUV-IITB, Autonomous Underwater Vehicle Team

Software developer

2015 - 2016

- Worked as part of a ~20 member team in the development of an underwater robot that can autonomously localize and perform realistic missions based on feedback from visual, inertial and acoustic sensors.
- Secured second place at the International AUVSI Robosub competition 2016.
- Maintained a modular software stack written in C++ and Python, using ROS for integration of various subsystems.
- Implemented a finite state machine for planning the execution flow of the robot.
- Developed and tuned a PID controller for controlling the 5 degrees of freedom of the AUV.
- Created various ancillary tools such as drivers for sensors, simulators and runtime debug interfaces.

PROJECTS

🔗 github.com/Mishalassif/height-persist

Fall 2021-Present

3D Object classification using the Persistent homology transform (PHT)

- Created a pipeline that takes a CAD model as input and vectorizes it using the Persistent homology transform.
- Trained a random forest classifier on the output of the vectorizing pipeline and obtained an accuracy of 80% on the ModelNet40 dataset containing 40 classes of CAD models.
- Working on a deep learning model that uses the PHT vectors to obtain a more accurate classifier. The sparse nature of the PHT vectors make this task challenging.

SOFTWARE SKILLS

Programming Python, C++, Matlab, Mathematica.

ML tools PyTorch, Tensorflow, Keras, scikit-learn.

Other tools \LaTeX , Git, ROS

PRESENTATIONS

- *Geometric Pontryagin Maximum Principle for discrete time optimal control*, 12th ICMAT Summer School on Geometry, Mechanics and Control, Spain, 2018.

RELEVANT COURSES

- **Probability:** Probability and random processes, Information theory, Stochastic processes.
- **ML:** Pattern recognition, Generative AI models, High dimensional geometric data analysis, Statistical learning theory.
- **Math:** Algebraic topology (I, II), Differentiable manifolds (I, II), Lie groups and Lie algebras.
- **Control theory:** Differential geometric control, Adaptive and Nonlinear control, Optimization.

TEACHING ASSISTANTSHIPS

- ECE 486 Control Systems, UIUC. *Fall 2020/Spring 2021*
- ME 310 Microprocessors and Automatic Control(Theory + Lab), IITB. *Fall 2018/Spring 2019*
- SC 624 Differential Geometric Methods in Control, IITB. *Spring 2018*
