TECHNICAL EXPERIENCE

Autonomous Underwater Vehicle Team (AUV-IITB)
Software developer   *2015 - 2016*
- Part of a team in the development of algorithms to enable an AUV to autonomously localise itself and perform realistic missions based on feedback from visual, inertial and acoustic sensors.
- Secured second place at the International AUVSI Robosub competition 2016.
- Maintained a very modular software stack written in C++ and Python, using ROS for integration of various subsystems.
- Implemented a finite state machine for planning the execution flow of the AUV.
- Developed and tuned a PID controller for controlling the 5 degrees of freedom of the AUV.

Software Skills

Programming Languages: C++, Python, Matlab.   **Other tools:** LaTeX, ROS, Gazebo, OpenCV.
